EDUCATION

The Chinese University of Hong Kong, Shenzhen

Master in Artificial Intelligence and Robotics

ShenZhen, GuangDong, China

Sep 2024 - Jun 2026(expected)

- Core Course: Optimization, Advanced Algorithms, Advanced AI, Topics in AI I, Speech & Language Processing, NLP, Mathematics for Robotics, Machine Learning, Image Processing & Computer Vision, Robot Manipulation.

Queen's University

Bachelor of computing, specialization in software design

Kingston, Ontario, Canada

Sep 2020 - Jun 2024

- Core Course: Diff & Integral Calculus, Linear Algebra, Discrete Math, Statistics, Intro to Computing Science, Logic for Computing Science, System Level Programming, Data Structure, Software Specifications, Computer Architecture, Operating System, Software Quality Assurance, Human-Computer Interaction, Software Architecture, Programming Paradigms, Algorithms.

Internship EXPERIENCE

Internship - China Telecom Co., Ltd.

Portal Website Development - Summer Intern

NanChang, JiangXi

Jul 2023 - Aug 2023

- Built backend routes, session and permission logic in Django; modularized login, menu and portal components.
- Implemented interactive pages and animations with Layui + JavaScript; integrated front-end component calls through a C++ extension layer.
- Delivered SSO and seamless page switching to aggregate internal platforms under one portal with consistent account state.
- Stack: Python (Django), JavaScript, C++, Layui, Web integration.

Internship - Shenzhen Quicktalk Technology Co., Ltd.

Digital Avatar - Summer Intern

NanChang, JiangXi

May 2023 - Jul 2023

- Trained, tested and tuned a Chinese Rasa dialog model; cleaned Chinese corpora and expanded multi-turn intents/entities.
- Designed prompt-engineering schemes and connected to ChatGPT for open-domain conversations with virtual avatars.
- Rewrote training samples from logs and added custom Actions to unify FAQ, task-oriented flows and chit-chat entry points.
- Stack: Python, Rasa, Prompt Engineering.

Internship - Shenzhen Quicktalk Technology Co., Ltd.

Conversational AI - Summer Intern

NanChang, JiangXi

May 2023 - Jul 2023

- Implemented face detection/recognition with Python (OpenMV) and linked it to dialog entry for greeting after recognition.
- Deployed Chinese Rasa models with intent/entity dictionaries and custom Actions for Q&A, form collection and flow control.
- Ran dialog regression tests, filed issues, and iteratively retrained models and rules.
- Stack: Python, OpenMV, Rasa, AI testing.

ACADEMIC PROJECT

Classical ML vs. LLM In-Context Learning (ICL): A Comparative Study | Team Academic Project

Jan 2025 - May 2025

- Built an ICL pipeline using SiliconFlow API to call Qwen2-1.5B/2.5-7B, ChatGLM3-6B, GLM-4-9B with unified invocation and parsing.
- Designed 5-shot/10-shot prompt templates for classification (integer labels) and regression (real values), enforced “numbers-only” outputs (temperature=0) and regex post-checks to avoid format drift.
- Benchmarked ICL on Iris (classification) and California Housing (regression) against SVM/Random Forest/MLP; standardized CML preprocessing and scripted evaluation for both tracks.
- Summarized ICL behavior across model size, K-shot, task type, prompt format and instruction clarity; proposed a hybrid “ICL guiding + CML learning” route.
- Stack: Python, SiliconFlow API, ICL, Prompt Engineering, scikit-learn.

Greenhouse Booking & Management System Development(Undergraduate Capstone) | Team Development Project

Sep 2023 - Apr 2024

- Built a Django-based backend covering auth/roles/permissions, booking orders, invoices and admin pages.
- Designed MySQL schemas for greenhouse/growth-chamber zoning and benches; added pricing and settlement models with migrations.
- Developed an admin console (users/roles, accounts, orders/prices, research requests) and recent-actions tracking.
- Implemented booking visualization and business rules (zonal/bench selection, 26-area chamber map with “oven” flag, mandatory cleaning days, etc.).
- Wrote user and deployment manuals (env setup, DB config, Navicat import, Django migrations); added unit tests and error logging with email support.
- Stack: Python (Django), MySQL, Navicat, HTML/CSS, ReportLab, unit testing.

Bitcoin Software Architecture Analysis Report | Team Academic Project

Jan 2023 - Apr 2023

- Mapped conceptual → technical architecture for transaction validation, blockchain, nodes/consensus, wallet/private key/address.
- Produced sequence and component diagrams for end-to-end flows (sign → broadcast → confirmation).
- Stack: software architecture analysis, sequence diagram, block-chain fundamentals.

Interactive Shopping Assistant | Team Academic Project

Jan 2023 - Apr 2023

- Designed discount-information aggregation, multi-channel categorization/search/display, and price-history/trend prototypes.
- Optimized typography, icons and flows for older users; completed usability walkthroughs and interaction deliverables.
- Stack: UI/UX design, mobile app prototyping (demo).

ADDITIONAL INFORMATION

- Computer Language Skills: proficient in python, capable of using C, Java, Html, C++, SQL, JavaScript, Prolog, Haskell, MathLab, Bash at fundamental level.
- AI/ML: PyTorch, Rasa, prompt engineering; ChatGPT/ChatGLM; RVC, GPT-SoVITS; Stable Diffusion WebUI.
- Software Skills: Git, MySQL/Navicat; Microsoft Office/WPS; Adobe Premiere; CapCut
- Hobbies : Mobile games, Basketball, Movies, Travelling, etc.
